

# Traffic Barricade Guide

## USER'S GUIDE TO TYPE I, II & III BARRICADES

Type I, II and III traffic barricades control traffic flow and protect people, but their distinctions can be confusing. To help you choose the right traffic barrier, we created this printable guide exploring three top barricade types.

Thanks to 95TSS's MUTCD-compliant traffic barricade line-up, you can boost work zone visibility and call out hazards before accidents happen. With multiple lengths and sheeting options, we have traffic barriers for every application.

# TYPE I BARRICADES

Since **Type I barricades** include just one reflective panel with alternating orange and white stripes, daylight use is recommended. Affordable and easy to install for light-traffic zones, these folding barriers collapse upon impact to minimize vehicle and surface damage.

## APPLICATIONS

Often used by striping companies, Type I barricades are mainly for closing sidewalks and private parking lots. **Other applications include:**

**Utility & maintenance operations**

**Foot traffic direction**

**Event & queue management**

## FEATURES & BENEFITS

- ✓ Corrosion-proof, 100% recyclable HDPE construction
- ✓ High-visibility safety colors
- ✓ Recessed & replaceable sheeted panels
- ✓ Standard & premium sheeting options
- ✓ Varied lengths to suit application
- ✓ Recessed LED-light brackets
- ✓ MASH accepted & NCHRP-350 compliant

## TYPE II BARRICADES

Ideal for sidewalks and country roads, **Type II barricades** have **two retroreflective rails** with alternating orange and white stripes. Highly visible in low-light conditions, Type II barriers fold open and collapse with impact to minimize collision damage.

## APPLICATIONS

This durable crowd and traffic control tool is perfect for busy jobsites, large events, airports and parking lots. **Applications include:**

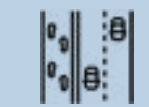

**Trench & hazard demarcation**

**Event & concert crowd control**

**Parking lot regulation**

**Sidewalk closure**

## FEATURES & BENEFITS

- ✓ Corrosion-proof, 100% recyclable HDPE construction
- ✓ High-visibility safety colors
- ✓ Recessed & replaceable sheeted panels
- ✓ Standard & premium sheeting options
- ✓ 24" or 36" panel width
- ✓ Built-in handle for quick deployment
- ✓ Sand- & water-ballasting options
- ✓ Easy nesting for compact storage
- ✓ Recessed LED-light brackets
- ✓ MASH accepted & NCHRP-350 compliant

# TYPE III BARRICADES

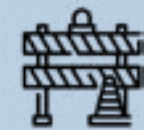

Unlike Type I and II barriers, **Type III barricades** do not fold. These long barriers (up to 8 feet) are built to stop traffic and consist of two vertical posts with three striped, reflective panels for peak visibility. Type III barricades may also incorporate signage for added motorist direction.

## APPLICATIONS

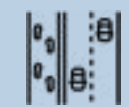

Large, Type III barricades are highly visible and built for heavy traffic. They may also include signage for added motorist direction. Type III barricades are also used for festivals, mega-events and high-security zones. **Applications include:**

**Expressway/interstate roadwork & construction**

**Major road closures**

**Sidewalk closure**

**Dignitary/VIP traffic re-routing**

**Emergency response management**

**Downed power line repairs**

## FEATURES & BENEFITS

- ✓ Corrosion-proof, 100% recyclable HDPE & metal construction
- ✓ High-visibility safety colors
- ✓ Easy assembly with heavy-duty components
- ✓ Recessed & replaceable sheeted panels
- ✓ Multiple recessed LED-light brackets
- ✓ Choice of foot styles
- ✓ MASH accepted & NCHRP-350 compliant
